**"A COMPUTATION OF THE NINTH DEDEKIND NUMBER USING  
FPGA SUPERCOMPUTING" COVER LETTER**

Dear Editors and Reviewers of TRETTS,

We would like to thank you for acceptance and final recommendations. We have applied them to the paper draft, and present to you our camera-ready version.

In addition to the changes requested in the reviews, we have added one citation: "Patrick De Causmaecker and Lennart Van Hirtum. 2024. Solving systems of equations on antichains for the computation of the ninth Dedekind Number. arXiv:2405.20904 [math.CO]". This arxiv preprint contains more expanded mathematics of the P-Coefficient formula used, as well as two extentions  $D(n+3)$  and  $D(n+4)$ .

Thank you again for your consideration and reviewing efforts,

Lennart Van Hirtum, and the rest of the author team.
